Pittsburgh Side-Effects Rating Scale

Instructions: Listed below are several possible negative effects (side effects) that medication may have on a child. Please read each item carefully and circle the number that indicates if the severity of the side effects is none, mild, moderate or severe. Please think about your contact with your child today when rating his/her side effects.
When requested, or wherever you feel it would be useful for us to know, please describe the side effects that you observed or any other unusual behaviors in the "Comments" section below. The same person should complete this scale each time it is completed.

Use the following to describe the severity of the side effects your child maybe experiencing:

None: The symptom is assessed and is found absent
Mild: The symptom is present but is not sufficient to cause concern to the child, peers or adults and would not affect a decision to recommend medication.
Moderate: The symptom causes impairment of functioning or social embarrassment to a degree that the benefits of medication must be considerable to justify the risks of continuing medication.
Severe: The symptom causes impairment of functioning or social embarrassment to a degree that the child should not continue to receive medication as part of treatment.

	None	**Mild**	**Moderate**	**Severe**
Motor Tics—repetitive movements: jerking or twitching (e.g., eye blinking-eye opening, facial or mouth twitching, shoulder or arm movements)—please describe below				
Buccal-lingual movements: Tongue thrusts, jaw clenching, chewing movement besides lip/cheek biting—please describe below				
Picking at skin or fingers, nail biting, lip or cheek chewing—please describe below				
Worried/Anxious				
Dull, tired, listless				
Headaches				
Stomachache				
Crabby, Irritable				
Tearful, sad, depressed				
Socially withdrawn—decreased interaction with others				
Hallucinations (sees or hears things that aren't there)				
Loss of appetite				
Trouble sleeping (time went to sleep)
